

Public Health Dashboard Map

Purpose

We are solving The Triage Crisis in public health.

Our goal is to show the communities or the government the main health indicators at the location, revealing them which health aspect that they need to focus on and create policies to improve the condition for those communities.

Our target customers group are those living in the U.S.

What we have done

- We use the circles plot to represent each area.
- We plot the points on the map by the zip code, and mark them with different colors based on the fixed severity bands from low (green) to high (red).

Tools

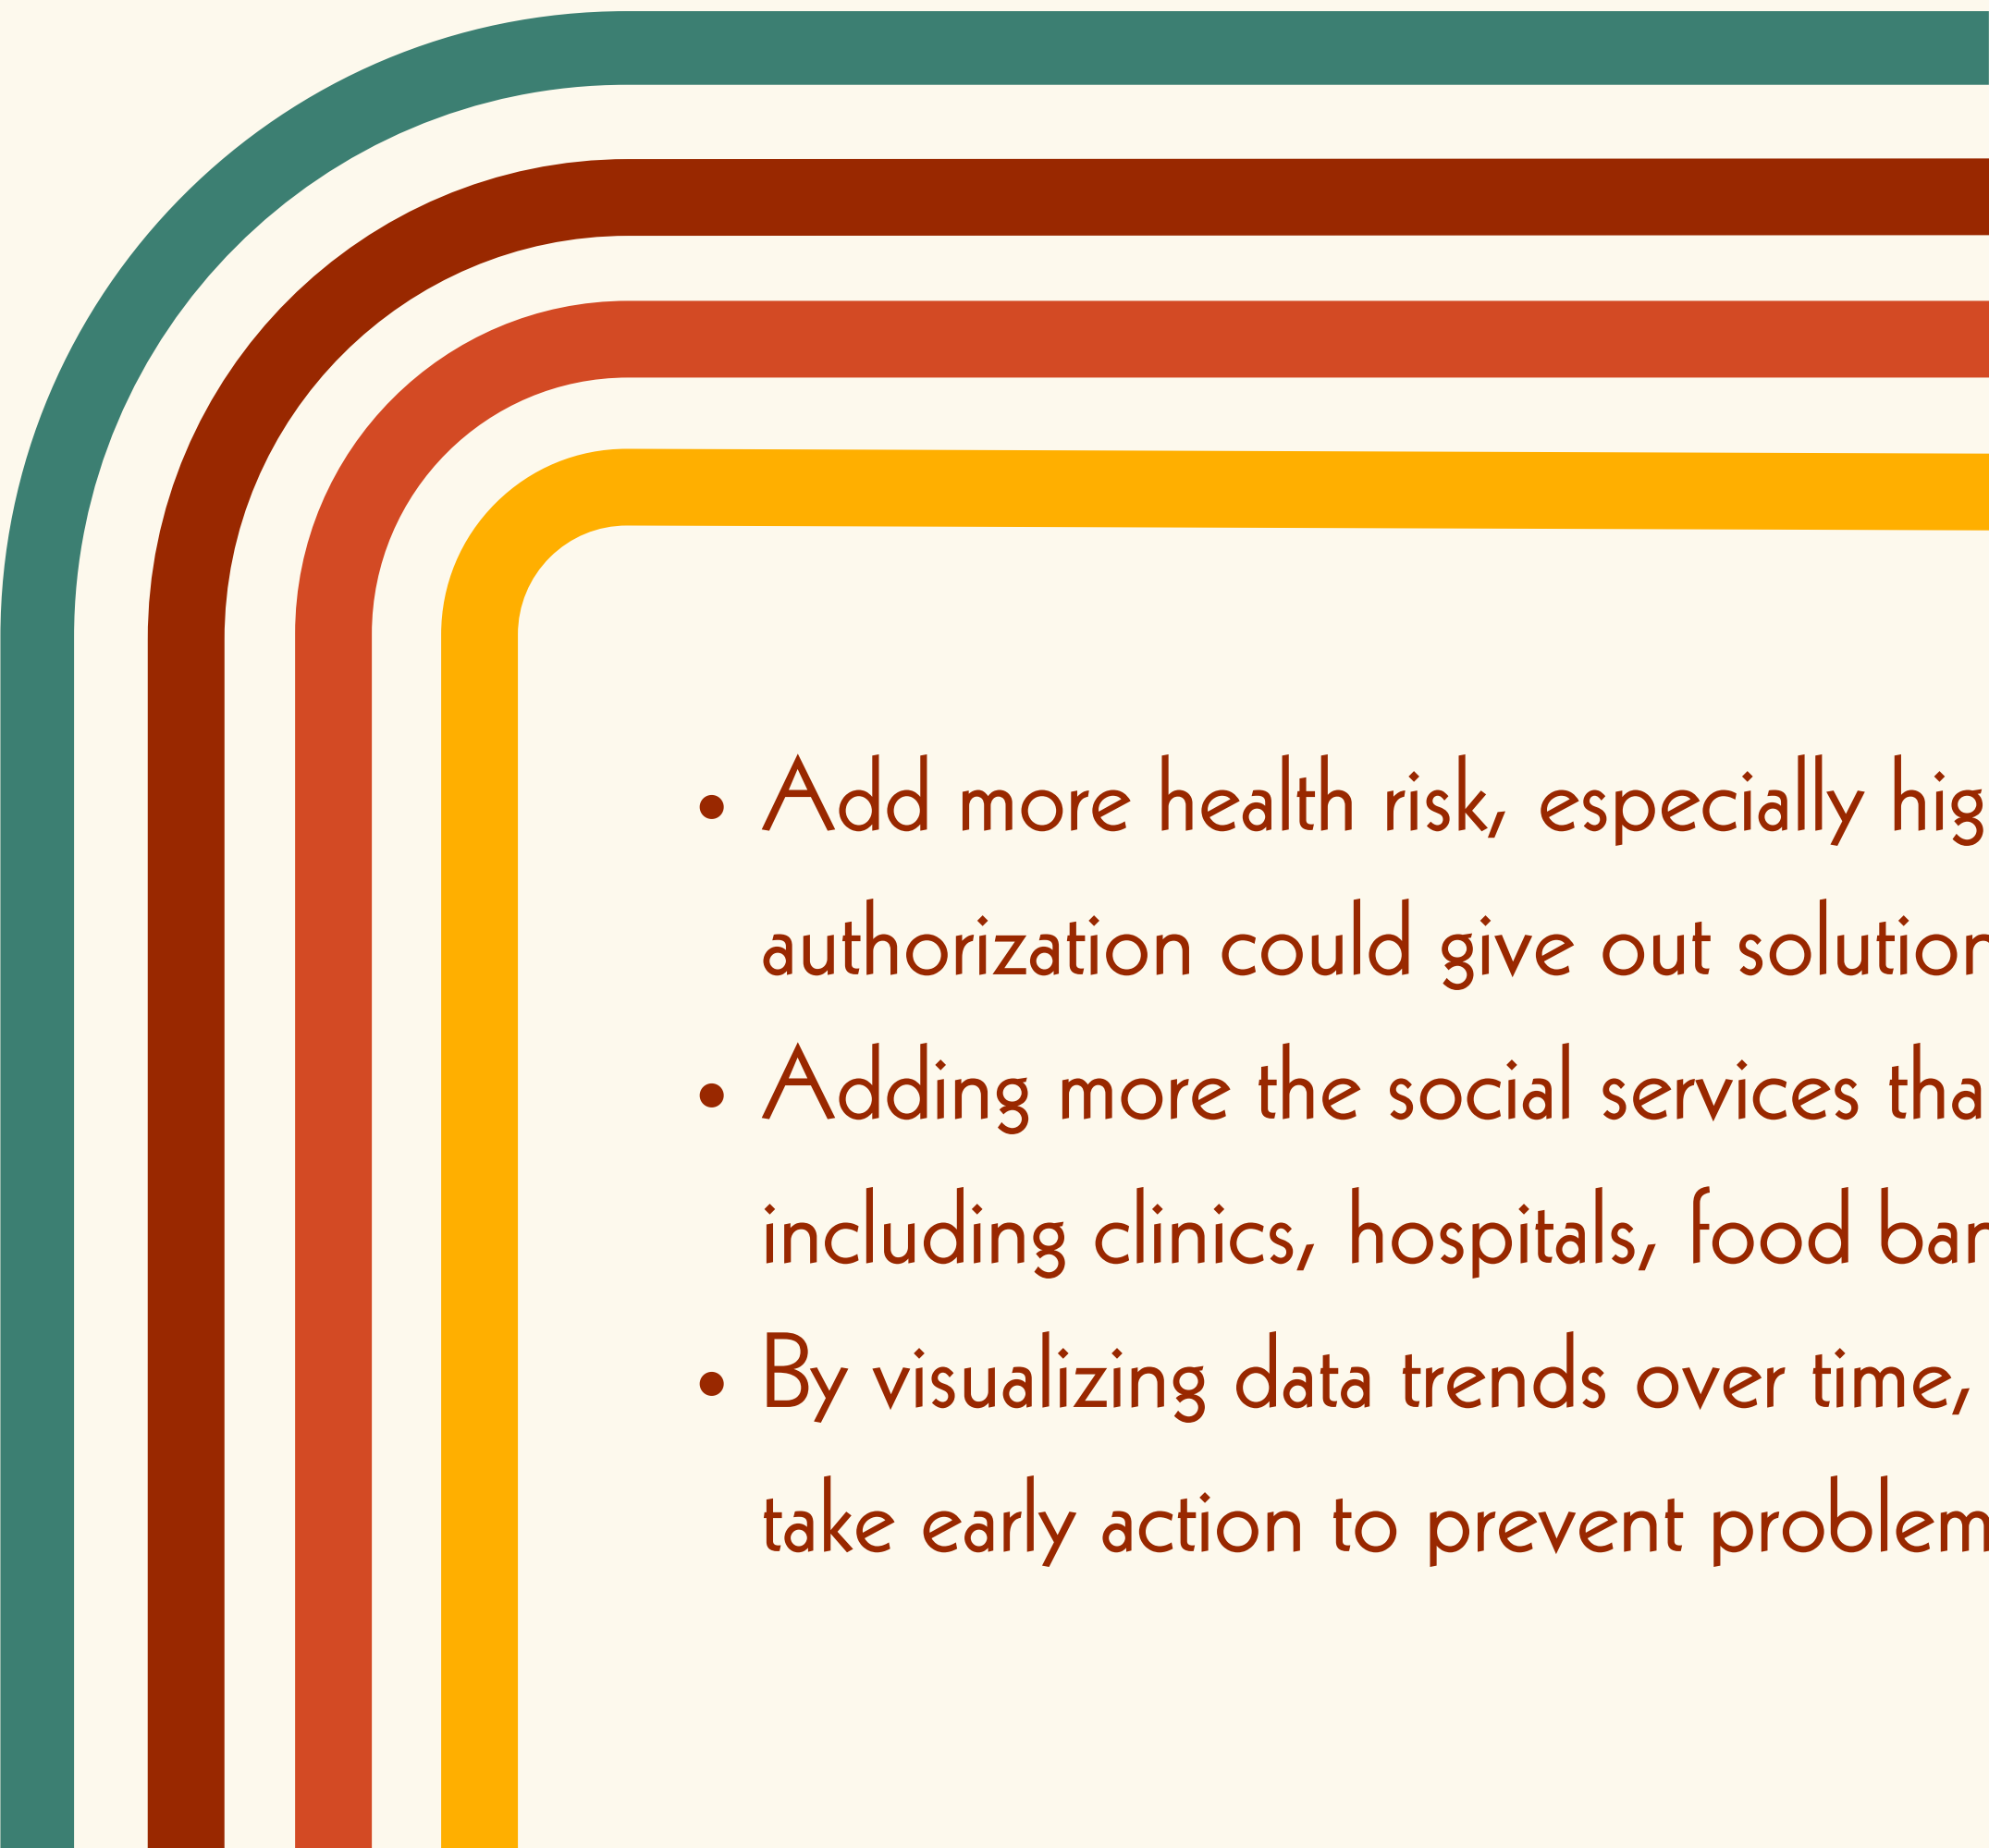

Data

- Health indication from the last 2 years .
- Zip code and coordination of the U.S.
- Social Determinants of Health (SDOH)

Language: Python, HTML, CSS, JavaScript

Tools:

- Claude AI
- Gemini
- Google Collab
- Canva

Future Development

- Add more health risk, especially highly spreadable disease so that the authorization could give out solution to protect the nearby areas.
- Adding more the social services that could improve the problems, including clinics, hospitals, food banks.
- By visualizing data trends over time, we can raise public awareness and take early action to prevent problems from worsening.
